Weekly Progress Report

Name: Amarnath
Domain: Digital Marketing
Date of submission: 05-10-2026
Week Ending: 04
Project: Meta Ads Audience for an EdTech Company's Digital Marketing Course

I. Work Done During the Week:

1. Tasks Completed:

- Reviewed the full campaign set up in Week 3 (objective, three ad sets, audiences, budget and ads) and corrected small settings errors before the final run.
- Compared the three ad sets (Students, Early-career professionals, Freelancers / business owners) on Reach, CTR, CPC and Cost per Lead using the tracking format.
- Optimized the campaign: shifted more budget to the better-performing ad set and paused weak ads and low-intent interests.
- Prepared the final project document with audience criteria, reasons for every choice, ad creatives and the results analysis.

2. Milestones Achieved:

Task	What was done	Milestone / Outcome
Campaign review	Checked objective, audiences, placements and budget	Error-free campaign setup
Performance analysis	Compared ad sets on Reach, CTR, CPC and Cost per Lead	Clear idea of the best audience segment
A/B comparison	Compared Reel, image and carousel creatives	Best-performing creative format identified
Optimization	Adjusted budget split and removed weak interests	Better expected return on investment
Final documentation	Wrote audience criteria with reasons and findings	Project ready for submission

3. Significant Contributions:

- Completed the project from start to end: audience research, campaign setup, analysis and optimization for an EdTech Digital Marketing course.
- Example: after comparing results, the Early-career professionals segment was given a larger budget share because its audience was closer to buying the course.
- Documented every targeting choice with a clear reason, so the audience can be reused for future campaigns.

II. Challenges and Hurdles:

1. Reading the Results Correctly:

- **Nature:** A high CTR did not always mean low Cost per Lead, so it was confusing to decide which ad set was truly the best.
- **Approach and solution:** Looked at more than one metric together (CTR, CPC and Cost per Lead) instead of depending on a single number.

2. Limited Data:

- **Nature:** With a small test budget, there was not enough data to be fully sure about the results.
- **Approach and solution:** Avoided big changes on small data, made small adjustments and noted the points to re-test in future.

3. Presenting the Findings Clearly:

- **Nature:** It was difficult to explain many criteria and reasons in a short and organized form.
- **Approach and solution:** Used tables, headings and bullet points, and took feedback from mentor and peers.

III. Lessons Learned:

1. Insights from the Challenges:

- Results should be judged using several metrics together, and decisions need enough data behind them.
- Continuous testing and optimization is what improves the return on investment of a campaign.

2. New Skills Acquired:

- Campaign performance analysis, A/B comparison of creatives, budget optimization and report writing.

3. Problem-Solving Techniques:

- Comparing options with data, making small changes step by step and checking the effect of each change.

4. Valuable Experience for the Future:

- Handling a Meta Ads campaign from audience creation to optimization gives me practical confidence for real Digital Marketing work.
