Industrial Internship Report on

Meta Ads Audience for an EdTech Company's Digital Marketing Course

Prepared by

Amarnath

BBA (Final Year)

Maharaja Agrasen University

Kalujhanda, Baddi, Himachal Pradesh

Domain: Digital Marketing

Executive Summary

This report provides details of the Industrial Internship provided by upskill Campus and The IoT Academy in collaboration with Industrial Partner UniConverge Technologies Pvt Ltd (UCT).

This internship was focused on a project/problem statement provided by UCT. We had to finish the project including the report within the internship period of 4 to 6 weeks.

My project was to create an optimized Meta Ads audience for an EdTech company's Digital Marketing course. I selected the location, age, language, demographics, interests and behaviors, gave a reason for every choice, set up and ran the campaign with a small test budget, compared the results, optimized the budget and planned retargeting.

This internship gave me a very good opportunity to get exposure to real digital marketing problems and to design a solution for them. It was an overall great experience to have this internship.

1 Preface

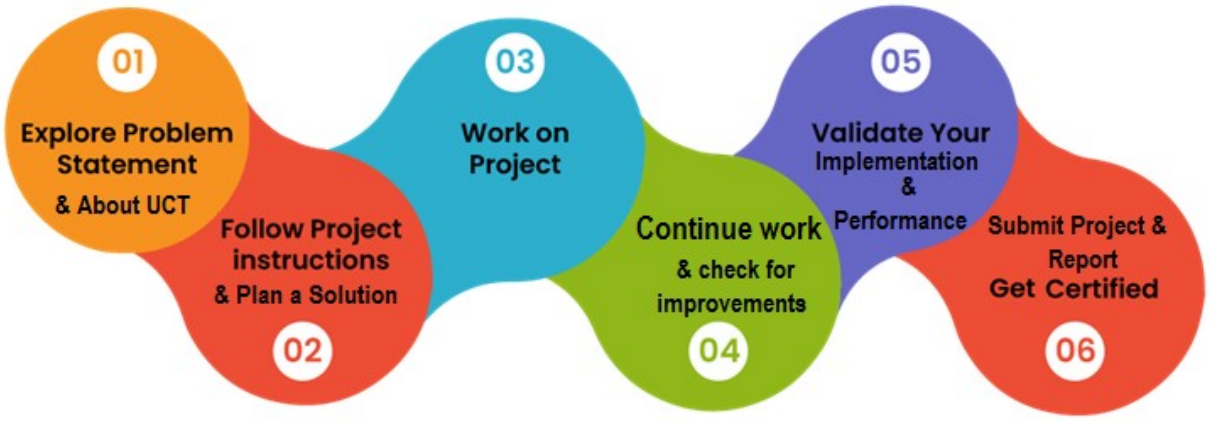

Over the weeks of this internship I worked on one project: creating an optimized Meta Ads audience for an EdTech company's Digital Marketing course. In Week 1, I explored Meta Ads Manager and finalized the core audience criteria with reasons. In Week 2, I refined the audience, planned Custom and Lookalike audiences, and drafted ad copy and a test budget. In Week 3, I built the campaign structure with the Leads objective, three ad sets and ad creatives, and defined the metrics to track. In Week 4, I reviewed and ran the campaign, compared the three ad sets on Reach, CTR, CPC and Cost per Lead, optimized the budget and prepared the final project document. In Week 5, I applied mentor and peer feedback, wrote a one-page audience summary, prepared a retargeting plan and studied Meta Pixel and conversion events before the final submission.

In digital marketing, theory alone is not enough. Tools such as Meta Ads Manager, audience targeting, budgets and metrics are learned best by working on a real problem. An internship gives this practical exposure, builds confidence and makes a student's profile stronger for jobs and future client work. As a final-year BBA student, this internship helped me connect what I studied in class, such as segmentation and targeting, with how marketing is actually done in the industry.

My project was to create a Meta Ads audience for an EdTech company for its Digital Marketing course. The task was to choose the right location, age, language, demographics, interests and behaviors, and to explain the reason behind every choice, so that the ad budget reaches the people who are most likely to enrol.

I am thankful to upskill Campus (USC) and UniConverge Technologies Pvt Ltd (UCT) for giving me this internship as a Digital Marketing Intern, starting from 10 August 2026. The program gave me a real problem statement, mentor guidance and the chance to work remotely at my own pace.

The program was planned week by week. Each week had a clear goal: learning the tool and finalizing the audience, refining it, building the campaign, collecting feedback, and preparing the final submission. A weekly progress report was submitted every week to record the work done, the challenges faced and the lessons learned.

I learned how Meta Ads Manager is organized, how Core, Custom and Lookalike audiences differ, how to balance audience size, and how to measure results with Reach, CTR, CPC, CPM and Cost per Lead. I also learned to write short ad copy for different segments, plan a test budget and explain every decision clearly. Overall, it was a very good and practical experience.

I sincerely thank upskill Campus and UniConverge Technologies Pvt Ltd, including Prabha Singh (HR Manager), for this opportunity. I also thank my mentors and peers for their feedback on my audience, ad copy and budget plan, and my teachers and friends at Maharaja Agrasen University for their constant support.

To my juniors and peers: start early, read the official Meta Business Help Center, test one change at a time, and always write the reason behind each decision. Ask for feedback, because it improves the final work a lot.

2 Introduction

2.1 About UniConverge Technologies Pvt Ltd

A company established in 2013 and working in Digital Transformation domain and providing Industrial solutions with prime focus on sustainability and RoI.

For developing its products and solutions it is leveraging various **Cutting Edge Technologies e.g. Internet of Things (IoT), Cyber Security, Cloud computing (AWS, Azure), Machine Learning, Communication Technologies (4G/5G/LoRaWAN), Java Full Stack, Python, Front end** etc.

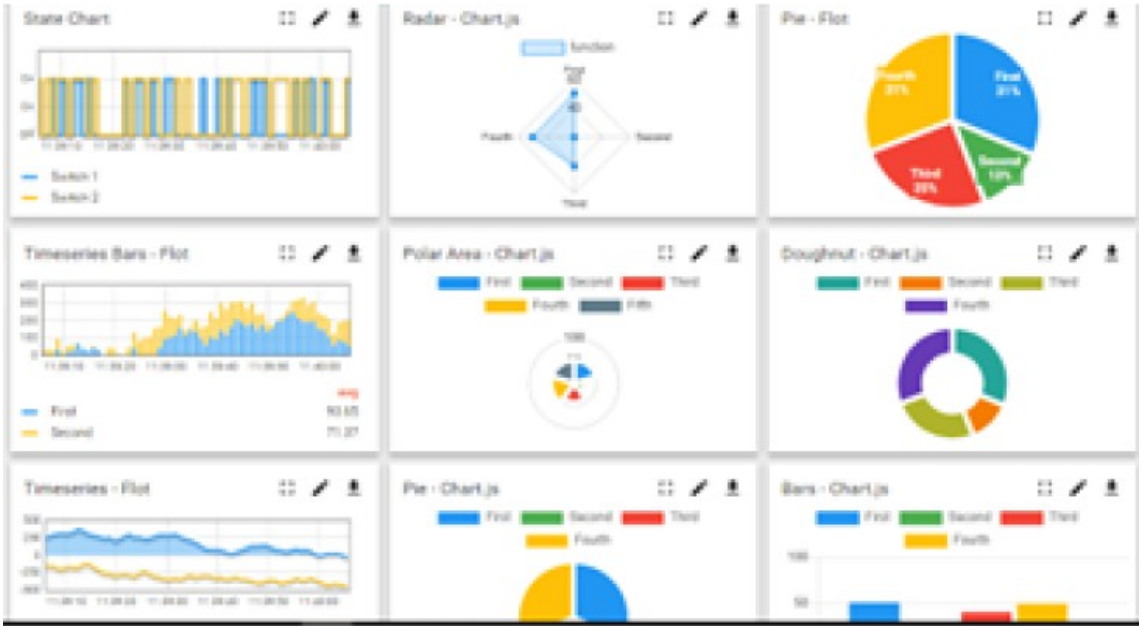

i. UCT IoT Platform (Insight)

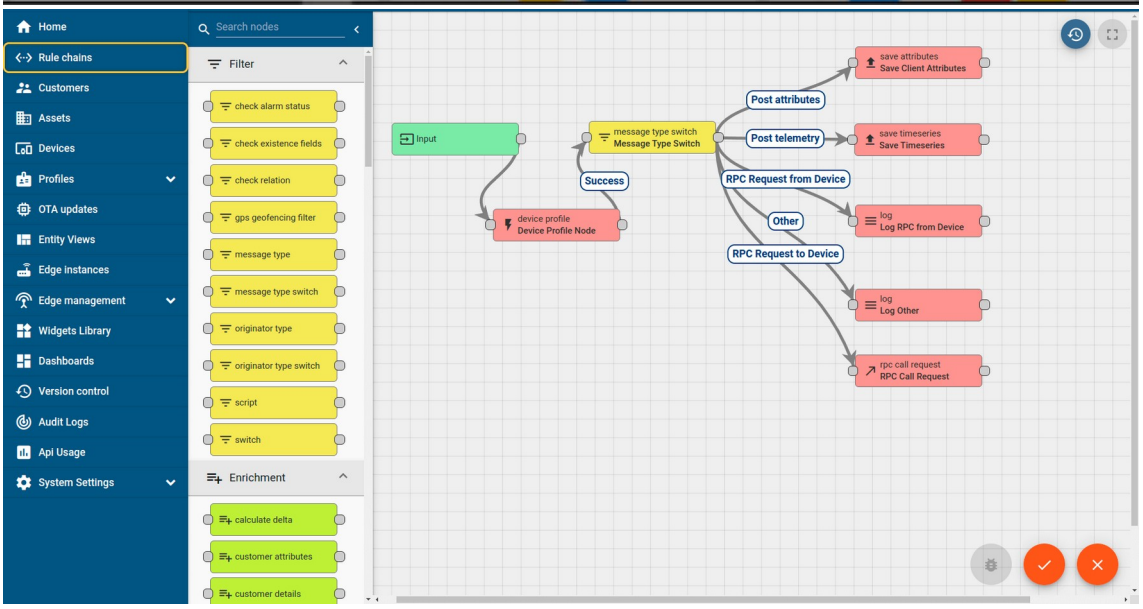

UCT Insight is an IOT platform designed for quick deployment of IOT applications on the same time providing valuable “insight” for your process/business. It has been built in Java for backend and ReactJS for Front end. It has support for MySQL and various NoSql Databases.

- It enables device connectivity via industry standard IoT protocols - MQTT, CoAP, HTTP, Modbus TCP, OPC UA
- It supports both cloud and on-premises deployments.

It has features to

- Build Your own dashboard
- Analytics and Reporting
- Alert and Notification
- Integration with third party application(Power BI, SAP, ERP)
- Rule Engine

ii. Smart Factory Platform (FACTORY WATCH)

Factory watch is a platform for smart factory needs.

It provides Users/ Factory

- with a scalable solution for their Production and asset monitoring
- OEE and predictive maintenance solution scaling up to digital twin for your assets.
- to unleased the true potential of the data that their machines are generating and helps to identify the KPIs and also improve them.
- A modular architecture that allows users to choose the service that they what to start and then can scale to more complex solutions as per their demands.

Its unique SaaS model helps users to save time, cost and money.

Machine	Operator	Work Order ID	Job ID	Job Performance	Job Progress		Output		Rejection	Time (mins)				Job Status	End Customer
					Start Time	End Time	Planned	Actual		Setup	Pred	Downtime	Idle		
CNC_S7_81	Operator 1	WO0405200001	4168	58%	10:30 AM		55	41	0	80	215	0	45	In Progress	i
CNC_S7_81	Operator 1	WO0405200001	4168	58%	10:30 AM		55	41	0	80	215	0	45	In Progress	i

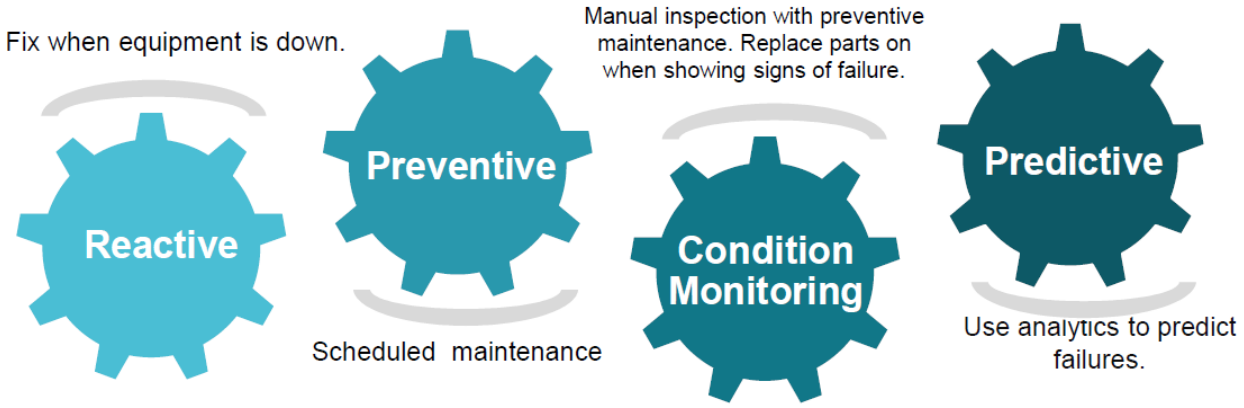

iii. LoRaWAN based Solution

UCT is one of the early adopters of LoRAWAN teschnology and providing solution in Agritech, Smart cities, Industrial Monitoring, Smart Street Light, Smart Water/ Gas/ Electricity metering solutions etc.

iv. Predictive Maintenance

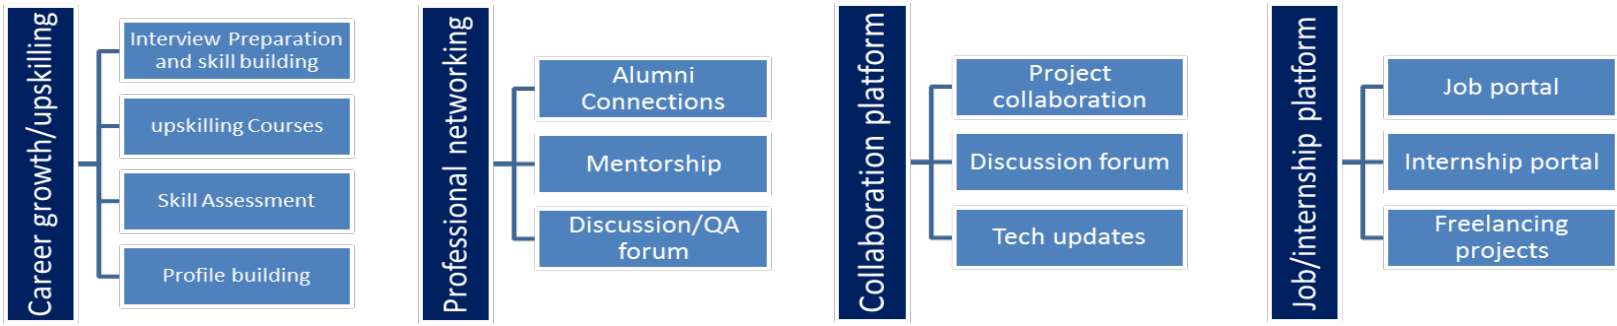

UCT is providing Industrial Machine health monitoring and Predictive maintenance solution leveraging Embedded system, Industrial IoT and Machine Learning Technologies by finding Remaining useful life time of various Machines used in production process.

2.2 About upskill Campus (USC)

upskill Campus along with The IoT Academy and in association with Uniconverge technologies has facilitated the smooth execution of the complete internship process.

USC is a career development platform that delivers **personalized executive coaching** in a more affordable, scalable and measurable way.

Career growth/upskilling
Interview Preparation and skill building
upskilling Courses
Skill Assessment
Profile building
Professional networking
Alumni Connections
Mentorship
Discussion/QA forum
Collaboration platform
Project collaboration
Discussion forum
Tech updates
Job/internship platform
Job portal

Freelancing projects

2.3 The IoT Academy

The IoT academy is EdTech Division of UCT that is running long executive certification programs in collaboration with EICT Academy, IITK, IITR and IITG in multiple domains.

2.4 Objectives of this Internship program

The objective for this internship program was to

- ☛ get practical experience of working in the industry.
- ☛ to solve real world problems.
- ☛ to have improved job prospects.
- ☛ to have Improved understanding of our field and its applications.
- ☛ to have Personal growth like better communication and problem solving.

2.6 Glossary

Terms	Acronym
CTR	Click-Through Rate
CPC	Cost Per Click
CPM	Cost Per Mille (cost per 1,000 impressions)
CPL	Cost Per Lead
ROI	Return on Investment
USC	upskill Campus
UCT	UniConverge Technologies Pvt Ltd

3 Problem Statement

In the assigned problem statement, I had to create an optimized Meta Ads audience for an EdTech company that sells a Digital Marketing course.

EdTech companies spend a large part of their marketing budget on Facebook and Instagram ads. If the audience is too broad, money is wasted on people who will never enrol. If the audience is too narrow, the ad reaches very few people and the cost per lead goes up.

The task was to find the right location, age, language, demographics, interests and behaviors for the course, and to give a clear reason for each choice. The audience also had to be cost-effective, easy to understand and reusable for future campaigns.

The key questions were: who is most likely to enrol in a Digital Marketing course, which cities and languages give good reach at a fair cost, and how the audience can be split for testing and retargeting.

4 Existing and Proposed solution

Existing solutions and their limitations

- Broad or automatic targeting (letting the platform choose who sees the ad): quick to set up, but gives little control and no clear reason for who is reached.
- Interest-only targeting copied from other campaigns: interests often overlap, so ad sets compete with each other and waste budget.
- Boosting posts without a plan: reaches people who like or react, but not always people who enquire about the course.
- Common limitation: no written reason for each choice, no split for testing, and no plan for people who showed interest but did not enquire.

Proposed solution

A structured Meta Ads audience for the Digital Marketing course. It combines a Core audience (location, age, language, gender, demographics, interests, behaviors and placements), three ad sets for testing, Custom and Lookalike audiences, and a retargeting plan, with a written reason for every choice. Table 1 shows the core audience criteria. In Week 2, overlapping and low-intent interests were removed or merged.

Value addition

- Every targeting choice has a reason, so the audience is easy to review and reuse.
- Three ad sets (Students, Early-career professionals, Freelancers / business owners) allow fair testing and separate ad messages.
- Audience overlap check and the Audience Size indicator avoid wasted spend.
- A full funnel: new audience first, then a warm retargeting audience with a follow-up message.
- Results compared across ad sets and creatives, and the budget optimized using Reach, CTR, CPC and Cost per Lead.
- A retargeting plan and a Meta Pixel and conversion events study for lead tracking.

Table 1: Core Meta Ads audience criteria

Criteria	Selected Targeting	Reason for Choice
Location	India: Delhi NCR, Mumbai, Bengaluru, Hyderabad, Pune, Kolkata, plus Tier-2 cities (Jaipur, Lucknow, Indore, Patna)	Metro cities have the most students and working professionals; Tier-2 cities have growing upskilling demand with lower CPM/CPC.
Age	18 - 35 years	Covers college students, fresh graduates and early-career professionals, the group most likely to enrol.
Language	English and Hindi	Course content and ads work best in English; Hindi widens reach across North and Central India.

Criteria	Selected Targeting	Reason for Choice
Gender	All genders	The course has no gender bias. Ad performance can be checked later to narrow it down.
Demographics	Education: college students, recent graduates, bachelor's degree. Job titles: marketing executive, freelancer, business owner. Life event: recently graduated	These people look for career growth, skill addition or a career switch, so intent to learn is high.
Interests	Digital marketing, Social media marketing, SEO, Online advertising, Online education, E-learning, Entrepreneurship, Freelancing, Career development	Shows direct or closely related interest in the course topic and in learning online.
Behaviors	Engaged shoppers, Small business owners, Online learners / frequent Facebook and Instagram users, Mobile device users	Targets people who are active online, comfortable with online payments and used to online learning.
Placements	Instagram Feed and Reels, Facebook Feed, Stories	The target age group spends most of its time on these placements, giving better reach and engagement.

4.1 Code submission (Github link)

This is a Digital Marketing project, so the main deliverable is the project document (the Meta Ads audience document). It is submitted here in place of a code file.

https://github.com/amarnath1200612206-debug/upskillcampus/blob/main/MetaAdsAudience.pdf

4.2 Report submission (Github link) :

https://github.com/amarnath1200612206-debug/upskillcampus/blob/main/MetaAdsAudience_Amarnath_USC_UCT.pdf

5 Proposed Design/ Model

The design of this project follows the flow of a Meta Ads campaign. It starts with the business goal, moves through audience research and refinement, then campaign building, and ends with tracking and retargeting. Each stage feeds the next, and the results of tracking are used to improve the audience.

5.1 High Level Diagram (if applicable)

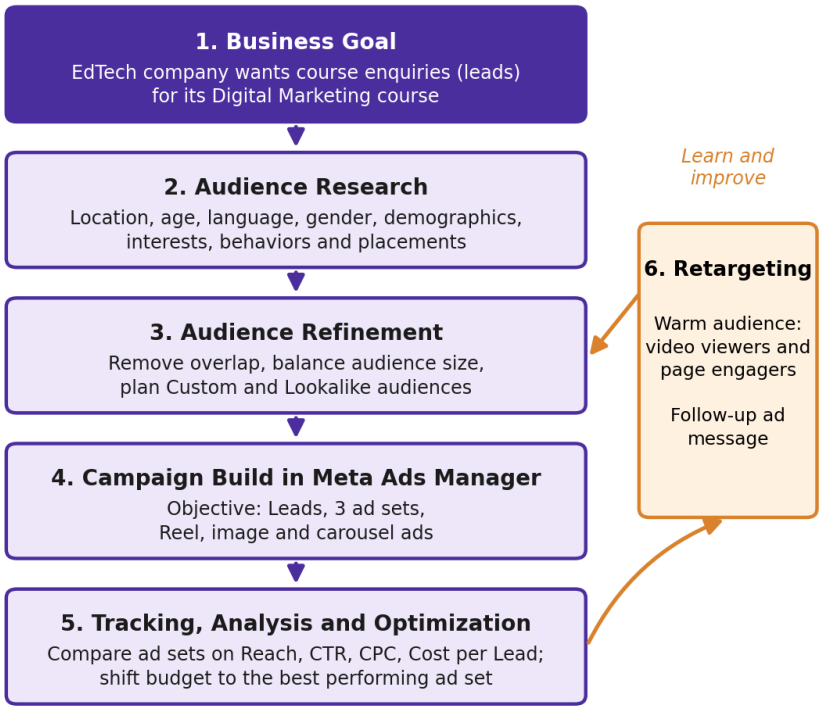

Figure 1: HIGH LEVEL FLOW OF THE META ADS AUDIENCE PROJECT

5.2 Low Level Diagram (if applicable)

The campaign is built as one campaign with three ad sets, and three ad formats under each ad set.

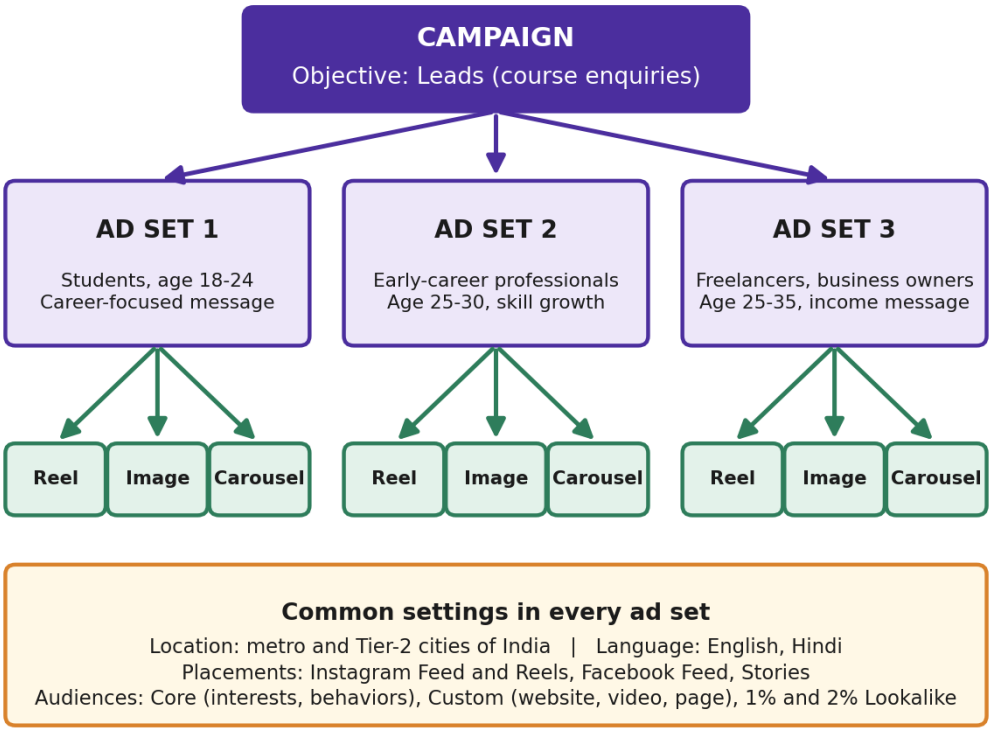

Figure 2: LOW LEVEL VIEW: CAMPAIGN, AD SETS AND ADS

5.3 Interfaces (if applicable)

The following tools and interfaces were used in this project:

- **Meta Ads Manager:** to create the campaign, ad sets and ads, and to set audience, budget and placements.
- **Audience Size indicator and overlap check:** to keep the audience balanced and stop ad sets from competing with each other.
- **Meta Business Help Center and Meta Blueprint:** for learning and reference on audience targeting.
- **Meta Pixel and conversion events:** to understand lead tracking on the course landing page (studied in Week 5).
- **Metrics format:** a simple sheet to record Reach, Impressions, CTR, CPC and Cost per Lead, used in Week 4 to compare the ad sets.

6 Performance Test

In digital marketing, performance depends on constraints such as budget, audience size, overlap and tracking. This section lists the constraints found in the project, how the design handled them, and what was tested and found.

Constraints and how the design handled them

Constraint	How it was handled in the design
Limited ad budget	Started with an equal daily split across the 3 ad sets for a fair test, then shifted more budget to the better-performing ad set in Week 4.
Audience size (too broad or too narrow)	Added and removed filters step by step while watching the Audience Size indicator, until it showed a healthy middle range.
Overlap between interests and ad sets	Checked overlap, merged similar interests and kept each ad set focused on one clear group.
Choosing the campaign objective	Compared Traffic, Engagement and Leads, and selected Leads because the goal is course enquiries.
Reading the results correctly	A high CTR did not always mean a low Cost per Lead, so CTR, CPC and Cost per Lead were read together instead of using one number.
Limited data from a small test budget	Avoided big changes on small data, made small adjustments and noted the points to re-test in future.
Small warm audiences for retargeting	Combined several sources (video viewers, page engagers) and planned to add Lookalike audiences to grow reach.

The campaign was run with a small test budget, so the amount of data was limited and the results should be seen as early indications, not final proof. The detailed results analysis is included in the project document. If the budget is too low, the audience is too narrow or the ad sets overlap, the metrics will become worse. The recommended way to handle this is to start with an equal budget, review several metrics together and then move budget to the best performing ad set in small steps.

6.1 Test Plan/ Test Cases

No.	Test case	What was checked	Expected result
T1	Audience size	Audience Size indicator for the core audience	Not too broad, not too narrow
T2	Overlap	Overlap between interests and between ad sets	No competing ad sets
T3	Objective	Campaign objective compared with the business goal	Objective is Leads
T4	Campaign review	Objective, audiences, placements and budget before the run	Error-free campaign setup
T5	Ad set comparison	Students, Early-career professionals and Freelancers on Reach, CTR, CPC and Cost per Lead	Best audience segment identified
T6	Creative comparison	Reel, image and carousel creatives	Best-performing format identified
T7	Optimization	Budget split, weak ads and low-intent interests	Better expected return on investment
T8	Review	Mentor and peer feedback on audience and ads	Feedback collected and applied

6.2 Test Procedure

1. Built the core audience in Meta Ads Manager and watched the Audience Size indicator while adding or removing filters.
2. Checked the audience overlap and merged similar interests.
3. Compared the campaign objectives (Traffic, Engagement, Leads) using the Meta Business Help Center and selected Leads.
4. Wrote separate ad copy for each ad set and planned an equal test budget.
5. Reviewed the full campaign set up and corrected small settings errors before the run.
6. Ran the campaign with a small test budget and recorded Reach, CTR, CPC and Cost per Lead in the tracking format.
7. Compared the three ad sets and the Reel, image and carousel creatives using more than one metric together.
8. Optimized the campaign: shifted budget to the better-performing ad set and paused weak ads and low-intent interests.
9. Shared the plan and results with mentor and peers and applied their feedback to the project document.

6.3 Performance Outcome

- The core audience reached a healthy middle range of size after step-by-step filter changes.
- Overlapping and low-intent interests were removed, so each ad set targets one clear group.
- The Leads objective matches the goal of getting course enquiries.
- The campaign setup was reviewed and made error-free before the run.
- After comparing results, the Early-career professionals segment was given a larger budget share, because its audience was closer to buying the course.
- The best-performing creative format was identified from the Reel, image and carousel comparison.
- Weak ads and low-intent interests were paused, which gives a better expected return on investment.
- Because the test budget was small, big changes were avoided and the points to re-test were noted.
- Mentor and peer feedback was applied to the project document: clearer audience criteria, shorter reasons and a cleaner layout.

7 My learnings

Through this internship I learned the following:

- **Meta Ads Manager:** how a campaign, ad sets and ads are organized, and how audience settings work.
- **Audience types:** the difference between Core, Custom and Lookalike audiences, and how to use the Audience Size indicator.
- **Metrics:** Reach, Impressions, CTR, CPC, CPM, Cost per Lead and ROI, and how audience quality affects them.
- **Strategy:** audience research, overlap checking, budget planning and a full funnel with retargeting.
- **Analysis and optimization:** comparing ad sets and creatives with several metrics together, and improving the campaign with small, data-based changes.
- **Tracking:** the basics of Meta Pixel and conversion events.
- **Soft skills:** ad copywriting, professional report writing, learning from official documentation and asking for feedback.

These skills will help me in my career in digital marketing, for example in running social media ads, working with clients and explaining marketing decisions with clear reasons. As a BBA student, this project connected classroom ideas such as segmentation and targeting with real tools used in the industry. Changing one thing at a time and breaking a big task into small steps are habits I will continue to use.

8 Future work scope

Some ideas that could not be done because of the time limit, but can be taken up in future:

- Re-test the campaign with a larger budget to get more reliable data, since the first test had limited data.
- Build 1% and 2% Lookalike audiences from real course enquiries and buyers, and compare them with the core audience.
- Run more A/B tests on headlines, ad copy and creative formats.
- Set up Meta Pixel and conversion events on the landing page and run retargeting for video viewers and page engagers.
- Keep shifting budget to the best performing ad set in small steps and track the effect of each change.
- Extend the same audience approach to other platforms such as Google Ads, YouTube and LinkedIn.
